EDUCATION

Masters in Cybersecurity

California State University, Dominguez Hills (CSUDH) GPA: 3.9/4.0

December 2025

Carson, CA

Courses: CyberOps & Cloud DevSecOps, Information Security Policies and Procedures, Network Security, Advanced Hacking Prevention, Cyber Forensics, Data Communications and Computer Networks.

Certifications: CompTIA Security+

Bachelor of Technology in Information Security and Digital Forensics

Dr. MGR Educational and Research Institute

May 2023

Chennai, IND

EXPERIENCE

DevSecOps Engineer

Saayam For All

February 2026 - Present

Remote, CA

- Owned data protection implementation for the 1.0 MVP Release, configuring KMS encryption at rest for S3 and RDS and enforcing least-privilege ACLs across the AWS environment as part of CIS Control 3 compliance.
- Advanced a stalled software asset management initiative by auditing 148 Lambda functions and EC2 instances, resolving blocked access gaps, and driving documentation of service account ownership across the AWS organization.
- Managed security hardening tasks from scope to resolution across Agile sprints, collaborating with cross-functional engineers on a live cloud-native platform serving real users.

Academic Tutor

California State University, Dominguez Hills

January 2024 - May 2025

Carson, CA

- Mentored 20+ students in technical concepts, adapting instruction to individual learning gaps and tracking progress through iterative assessments.

PROJECTS

DriftGuard - CI Gate & Auto-Remediation for AWS | AWS, Terraform, GitHub Actions, Python

September 2025

- Architected an event-driven remediation system on AWS using Lambda triggered by EventBridge on CloudTrail events, automatically correcting public S3 buckets and open security groups the moment they drift from policy.
- Built a CI security gate using Checkov and OPA/Rego that validates every Terraform plan against 5 policy controls before merge, blocking misconfigured IaC from reaching production.
- Enabled immediate visibility into infrastructure state for engineering and operations teams by publishing all findings to AWS Security Hub and CloudWatch in real time.

AI-Augmented SOC Triage System | Python, FastAPI, Splunk, AWS Lambda, Docker

August 2026 - Present

- Designed an event-driven triage pipeline that enriches Splunk alerts with MITRE ATT&CK context, IP reputation signals, and LLM-generated reasoning chains before surfacing prioritized recommendations to analysts.
- Implemented human-in-the-loop validation before any automated action executes, and secured 39 Python modules via GitHub Actions with Bandit scanning and secrets detection on every commit.

Threat Hunting and EDR Simulation | Splunk, Wazuh XDR, Sysmon, MITRE ATT&CK

July 2025 - September 2025

- Built a threat detection lab end-to-end, deploying Sysmon on Windows 11, ingesting logs into Splunk, and simulating 3 adversary techniques mapped precisely to MITRE ATT&CK T1059.001, T1547.001, and T1071.001.
- Engineered 3 SPL detection queries scoped to Sysmon event codes 1, 3, and 13, demonstrating full kill-chain traceability from raw telemetry to technique classification.

Enterprise Multi-Site Network Design | Cisco Packet Tracer

May 2025

- Designed and configured a multi-site enterprise network spanning two regions, implementing EIGRP, VLANs, and Inter-VLAN routing on multi-layer switches for redundant, scalable connectivity.
- Evaluated architectural tradeoffs between EIGRP and OSPF, selecting EIGRP for faster convergence in a multi-site topology, validating the design through packet tracing and route table analysis.

PUBLICATIONS

EIRA - A Cyberbot | Python, NLTK

June 2022 - April 2023

- Published a peer-reviewed paper on an NLP-driven security advisor that maps natural language queries to CVE remediations. (ijndr.org/EIRA-A_Cyberbot)

TECHNICAL SKILLS

Cloud and Infrastructure: AWS (EC2, S3, IAM, Lambda, EventBridge, CloudTrail, CloudWatch, GuardDuty, Security Hub, VPC, KMS, RDS, SNS), Terraform, Docker, GitHub Actions, CI/CD

Networking: EIGRP, OSPF, VLANs, Inter-VLAN Routing, Cisco Packet Tracer

Security and Automation: MITRE ATT&CK, Splunk (SPL), Wazuh XDR, Snort, FastAPI, Incident Response, Penetration Testing

Languages: Python, Bash, PowerShell, C, C++
